Life Safety Manager

Life Safety Manager

The management of Life Safety continues to be a key topic for today's healthcare facilities. The Joint Commission has expanded on the subject of Life Safety with a newly dedicated chapter in the Accreditation Manual for Hospitals and is scrutinizing each facility during the survey process by using a Life Safety Code Specialist during every survey. SiteFM™ Life Safety Manager provides a comprehensive management program (via web-based solution) designed to provide calculated, trending-of-inspection results. Whether you choose a "do it yourself" or a turnkey service for establishing your program, Facilities Technology Group has a Life Safety Management solution to meet your exact needs.

Life Safety Strategy	SiteFM™ Products Required	Responsibilities	Customer Skills & Required Resources
Economic Approach	Life Safety Manager	Customer inventories life safety assets and loads into database (uses pre-configured asset tables)	Facility technician manpower collects Life Safety asset information and enters into system
Value Approach	Life Safety Manager PLUS Life Safety Basic Build	FTG manages Life Safety Program development remotely	Facility technician manpower collects Life Safety asset information and enters into system
Premium Turnkey Approach	Life Safety Manager PLUS Life Safety Premium Build	FTG is onsite and builds Life Safety Management program using our own resources	Facility Management acceptance of final Life Safety Program implementation

SiteFM™ Life Safety Manager

A web-based application designed and configured specifically for the management of the Life Safety issues in healthcare and the Joint Commission Building Maintenance Program (BMP). SiteFM™ Life Safety Manager allows your facility to take control of Life Safety management - simply, quickly and cost effectively.

Life Safety Basic Build

Our Life Safety Basic Build is a REMOTE consulting service that delivers a compliance-ready Life Safety Management Program to your facility. We use your internal resources to inventory Life Safety assets to keep overall costs to a minimum. The data provided by your team will be loaded into a web-based Life Safety Management Program. You will receive an asset inventory, PM Calendar and initial compliance reports that will enable you to begin documenting Life Safety performance and preparing for Joint Commission surveys. You will have an established program to provide reminders, task specific guidance and detailed documentation demonstrating a pro-active management system for Life Safety.

Life Safety Premium Build

FTG will provide a complete outsourcing of a functional Building Maintenance Program (BMP) including ONSITE resources to inventory the 10 qualifying Life Safety asset types and training of the BMP application. Your facility will receive all data analysis and loading for the establishment of a PM program, toolset (forms) and collection of BMP asset data, asset data entered, PM schedules established, and inspection frequencies on data provided by your facility. This option can be packaged with one full year of SiteFM™ Work Order Manager.
