Professional Services

Facilities Technology Group works directly with hundreds of hospitals throughout the country. This gives us a unique perspective on healthcare and facility management. Whether implementing one of our industry-leading SiteFM™ Healthcare Maintenance Management Systems or assisting your facility with "best practices", our services are designed to provide significant value while removing burden from facility managers. Maintaining both efficiency and compliance in this rapidly changing healthcare market is not easy, but Facilities Technology Group can partner with you to make it easier. Find out why Facilities Technology Group customers rave about our products, support, and our services.

Our Approach

If you have an existing CMMS, we assess the quality of your data using a detailed process of automated scripts and visual review to determine requirements for cleanup and standardization. If you do not have a CMMS, we can perform full, on-site builds of Utility and Life Safety assets including Preventive Maintenance Schedules, gather full supporting data for assets, and place it into your SiteFM™ site. We can also do on-site barcoding of assets or provide the tools and teach your team how easy it is to accomplish barcoding with SiteFM™ Mobile. In addition to implementation services we can provide verification or full creation of Life Safety CAD drawings. We can host these for easy access by your employees and contractors, and can use them to create Space Allocation Books to visually show and report on space by department and specific use. Our approach has been fine tuned over many years and hundreds of hospital implementations, and is fast and efficient in improving accuracy of data, system efficiencies, and implementation costs.

Our Services Include:

Work Order Implementation/Data Conversion

Implementing a SiteFM™ Healthcare Maintenance Management System (Healthcare CMMS) is painless and can be executed in a few weeks (not months). Regardless of the current status of your data, whether you have an existing CMMS system or just a manual solution, we can deliver a conversion or build of assets that is accurate, report-ready, compliance-ready, and standardized for healthcare best practices (great for healthcare networks), thereby optimizing your data investment.

Features :

- Pre-configured standard asset categories
- Pre-configured Preventive Maintenance routines and process
- Compliance-ready Building Maintenance Plan (BMP) reporting
- Build of Utility and Life Safety assets
- Complete data that is standardized and report ready

Optional Services:

- Complete on-site build of utility assets
- Complete on-site build of life safety assets

Bar-Code Implementation and Consulting

Facilities Technology Group offers a range of services, including training and best practices to on-site turnkey barcode tagging.

SOC/Life Safety Drawing Creation and Verification

Let us maintain, update, or verify your SOC/Life Safety drawings. Our maintenance and update services come with unlimited edits/changes for a 1-year period. Specific areas updated are chute doors, fire/smoke barrier walls, hazardous locations, exits and exit passageways, occupation separation and suite boundaries. We host your drawings online for easy access and sharing.

Space Allocation Book

Medicare square footage/cost reporting is made easy with a space occupancy publication that illustrates how the space in a facility is being utilized by department, including detailed reports by floor and area. Drawings are hosted for secure web access by vendors, finance and facility operations for one full year.
